

# PolarDAM™ CRAC Covers

## Easy to Install and Remove

Cold or Hot Aisle Containment results in turning off CRAC and CRAH units. Since an idle CRAC/CRAH can allow 4000 to 6000 cfm to back flow through unit, it is necessary to seal idled units. In the absence of a back-draft damper, using simple PolarDAM CRAC Covers can close off units quickly and inexpensively.

PolarDAM CRAC Covers are made with a rugged fabric that has excellent tear and abrasion resistance . Covers are available in any size and several colors. Each cover seals with a 10” skirt and is secured using shock cord cover clips 1” from the bottom of the skirt. Clip snaps are installed into the CRAC sheet metal using self tapping screws.
