

PolarDAM CRAC Covers

Easy to Install and Remove

Cold or Hot Aisle Containment results in turning off CRAC units. Since an idle CRAC can allow 4000 to 6000 cfm to back-flow through the unit, it is necessary to seal idled units. In the absence of a back-draft damper, using simple PolarDAM CRAC Covers can close off units quickly and inexpensively.

PolarDAM CRAC Covers are made with a rugged fabric that has excellent tear and abrasion resistance. Covers are available in any size and several colors. Each cover is secured using easy to attach shock/bungee cords. The cords connect to the CRAC by looping over knobs installed into the CRAC housing.
