

PolarPlex™ Containment Stall

Product Information Sheet

PolarPlex™ Containment Stall

The PolarPlex™ Containment Stall is a solution for stand alone racks or small groups of isolated racks. The stalls are also used when there are restrictions on using the racks to support the containment and when other supporting options are limited.

Lightweight and Flexible

The PolarPlex™ Containment Stall is a three-sided top panel containment system that isolates air supply from perforated tiles, making that air only available for the rack. Made of aluminum and fire resistant clear polycarbonate materials the PolarPlex™ Containment Stall is lightweight and sturdy. The stalls are equipped with floor sliders that make them easy to move for rack access.

Sizes

24" x 24" base and available in 80" and 84" heights.
